Trusted Relationships Between Professionals

Blacksmith

Tool shop

Woodworker

Traditional professional tool shop bridged the communications between skilled wood-working specialists and the tool makers. Considering the specific job being performed such carpentry (frame making), doors and windows making, furniture making, and carving, tool shop owners identified the blacksmith that can fulfill those special needs. Japanese tools are developed based on the trusted relationships between the people skilled in their own profession.

Unlike being a reseller store of tools, we pride ourselves that can bridge the communications between woodworking professional and the most suitable blacksmith that can realize those special needs.

Japanese Steelmaking

Traditional Japanese steelmaking method used for tool-making for over 1000 years is called “tataka method”. Compared to western steelmaking process, temperature control of the tataka method was more difficult thus Japanese tools were more expensive. As a result, a unique laminated material called “tsuke-hagane” was

born that enables the blacksmith to optimize the hardness and strength of the materials used for the specific tool. Japanese woodworking tools and cutlery are the fruits of this development and they are highly acclaimed around the world.

About Inoue Hamono

Inoue Hamono is a Japanese tool shop in Tokyo dedicated to the woodworking professionals. We played important role nurturing the development of Japanese hand tools over four generations.

Most of the professional hand tools require preparation and maintenance, including sharpening, during their life. Unlike retail stores, we service the tools, teach proper use and maintenance methods for our customers who need the knowledge to properly use the tools to their highest potential. For example, there are many sizes and shapes of Japanese planes and chisels for different applications. We work with customers to find the tools most suited for their specific applications.

Inoue Hamono has been a trusted partner for the Japanese woodworking professionals for generations and is becoming the must visit destination for the woodworking lovers from all over the world in recent years.
